

**Milwaukee School of Engineering
Master of Science in Perfusion
Immunizations**

The Milwaukee School of Engineering and the clinical affiliates associated with the school have certain standards and guidelines in terms of immunization of perfusion students. The following list outlines the requirements for immunization. Please check off each box and provide the required documentation for each.

Infectious disease

- Tuberculosis – Documentation of TB Skin test within the past 12 months must be kept on file at school. If skin test is positive, a negative chest x-ray and annual symptom assessment must be on file at school.
- Rubella – Documentation of immunity to Rubella (one MMR vaccine or positive Rubella titre) must be kept on file at school.
- Rubeola – If born after 1957, documentation of immunity to Rubeola (two MMR vaccines or positive Rubeola titre) must be kept on file at school. If born before 1957, this requirement is waived.
- Chicken Pox (Varicella) – Documentation of verbal history of actual varicella disease must be kept on file at school. If history is not known, a varicella titre must be done and results kept on file at the school. Varicella vaccine is not mandated at this time.
- Hepatitis-B – Due to the exposure that a perfusion student has to blood or any other high-risk bodily fluids during procedures, documentation of Hepatitis B vaccine or signed refusal must be kept on file. This vaccination is very strongly recommended and comes in a series of 3 shots given over a 6-month period of time.

If you and your physician have reasons not to have these immunizations done, please give a brief explanation.

In addition to the aforementioned immunizations, documentation of attendance at an OSHA Blood borne Pathogen annual inservice is required. This course will be provided to the students when they get to campus.
